

LOAD TABLES | HEAVY DUTY, METRIC

VEHICULAR LOADS

Vehicular load tables are designed in accordance with the 16th Edition of the American Association of State Highway and Transportation Officials (AASHTO) for H-10 through H-25 loads with deflection limited to the lesser of .125 inches (3.175 mm) or L/400 to a maximum simple span of 8'- 0" (2,438mm). Automobile and forklift loads are similarly evaluated

with loads calculated and distributed in accordance with the criteria shown below. If the load conditions of your application are not adequately addressed in the criteria presented, please contact Vulcraft for assistance in determining the proper grating for your application.

Vehicular Load Table Criteria	H-25 ⁵ 	H-20/ HL-93 ⁶ 	H-15 	H-10 ² 	Passenger Vehicles 	5 Ton Forklifts ³ 	3 Ton Forklifts ³ 	1 Ton Forklifts ³ 
Truck/ Vehicle Weight (kN)					28	64	44	19
Load Capacity (kN)					16	44	27	9
Axle Load (kN)	178	142	107	71				
Impact Factor	30%	30%	30%	30%	30%	30%	30%	30%
Total Load (kN)	231	185	139	93	21	58	35	12
% of Load on Drive Axel					60%	85%	85%	85%
Wheel Load (kN)	116	93	69	46	10	29	17	6
A-Length of distribution perpendicular to axle or parallel to main bars (mm)	635	508	381	254	229	279	178	102
C-Width of distribution parallel to axle or perpendicular to main bars (mm)	635	508	381	254	229	279	178	102

Notes:

1. For continuous spans, use continuity factor = .80.
2. This distribution results in larger grating sizes for lighter trucks on shorter spans.
3. The fork lift wheel loads and load distribution patterns depicted above, generally, and only partially, represent the broad range of rubber-tired lift trucks available. For those applications falling outside of these examples, please contact Vulcraft.
4. Wheeled vehicles with urethane tires should NEVER be used in conjunction with open grid bar grating.
5. HS20 is the same as H20 and HS15 is the same as H15. The "S" stands for semi-trailer.
6. The "HL-93" notation shown with "H-20" represents AASHTO's truck loading standard post-1993. Since, 1993, H-10, H-20, etc. have been retired in lieu of the "HL-93" loading which represents all trucks.

VEHICULAR LOADS

Note: All loads based on Smooth surface

VEHICULAR LOADS

Grating Frames

Vulcraft's structural fabrication services can be leveraged to further aid you in getting a superior solution for covering your concrete opening by also obtaining an Embed Frame with your grating. A steel embed frame can improve the quality and lifespan of your project by:

- Shielding the concrete at the opening edges from cracking and chipping,
- Providing an edge for the opening when forming the concrete pour,
- Providing uniform elevation for the opening to minimize potential for uneven surfaces,

- And providing a smooth and uniform bearing surface for the grating, allowing for easier attachment and better performance over its lifetime.

Frames are available in normal rectangular configurations only and will be supplied as a fully-assembled, four-sided unit in sizes up to those that can safely be transported via normal flatbed carriers. Sizes or configurations other than this should be discussed with Vulcraft. Embed frames can be supplied mill finished, painted, or hot-dipped galvanized. To order, please include a detail similar to the following with the Clear Opening Width and Span clearly defined as well as the desired quantities and finish.

6mm FLAT BAR WELDED TO ANGLE 44mm **Standard Duty**

6mm FLAT BAR WELDED TO ANGLE 83mm **Heavy Duty**

Cross Bars are not load bearing

The bearing bars are the bars that carry the load and the cross bars hold the bearing bars in place creating the shape of the panel. In order to function properly, make sure that both ends of each bearing bar is supported by the load bearing structure and avoid the situation depicted in the picture to the left.
